

SHUBHAM DIXIT

Senior Software Engineer

shubhamdixit5314@gmail.com | +91 8827708602 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Senior Full Stack Developer with 9+ years of experience designing and deploying scalable, high-performance web applications. Expertise in JavaScript, TypeScript, React.js, Next.js, Node.js, and cloud-based architectures. Proven track record building complex, multi-app platforms (marketplaces, fintech, notarization) with event-driven backend workflows and integrated third-party service layers. Adept at collaborating in distributed teams, leading Agile/SCRUM delivery, and mentoring developers. Additionally skilled in Web3 development, integrating blockchain networks, smart contracts, wallets, and tokens for decentralized applications (dApps).

TECHNICAL SKILLS

- Languages: JavaScript, TypeScript, HTML5, CSS3
- Frontend: React.js, Next.js, Redux, Redux-Saga, Tailwind CSS, Material UI, Bootstrap, Formik
- Backend: Node.js, Express.js, Hapi.js, NestJS, gRPC, REST API, WebSockets, Trigger.dev
- Databases: PostgreSQL, MongoDB, Mongoose, Sequelize, Redis
- Blockchain/Web3: Smart Contracts, Solidity, Web3.js, Ethers.js, MetaMask, IPFS
- Platform/Integrations: HubSpot, Stripe, PandaDoc, Clerk, Twilio, Resend, SendGrid, Meilisearch
- Testing: Jest, Mocha, Chai, React Testing Library, Enzyme, Cypress
- Tools & Platforms: Git, Docker, AWS, Kafka, Socket.IO, PM2, Swagger, Postman, Turborepo, pnpm
- Project Management: Jira, Trello, Agile, SCRUM
- UI/UX & Dev Tools: Figma, Sketch, Webpack, Babel, Adobe XD, VS Code, Storybook

PROFESSIONAL EXPERIENCE

Full Stack Developer — Nutcake (DRPCRD)

2026 - Present | Remote

- Built and maintain core modules of Nutcake, a three-sided marketplace connecting brands, content creators, and talent agencies to run influencer marketing campaigns end-to-end — from creator discovery and outreach through contract negotiation, content delivery, and payout.
- Contributed across a pnpm/Turborepo monorepo of 11 TypeScript/Next.js applications (Brand, Creator, Talent Agency, Admin, and supporting public-facing apps) sharing a common component library and data layer, enabling consistent UX and rapid feature delivery across each user-facing surface.
- Worked within the platform's core domain model — a Mission → Deal Memo → Contract lifecycle — where a brand's campaign (Mission) fans out into individually-tracked creator agreements (Deal Memos), each progressing through its own commercial and delivery status ladder.
- Implemented async, event- and schedule-driven backend workflows on Trigger.dev (nightly sync jobs, batched messaging, social-media scraping, CRM push) to keep long-running or non-blocking work off the critical request path for the web apps.
- Integrated and maintained the platform's third-party service layer — HubSpot (CRM/sales sync), Stripe (payouts), PandaDoc (e-signature contracts), Clerk (auth), Twilio/Resend/SendGrid (creator messaging), and Meilisearch (creator/ad search) — as wrapped, shared clients consumed across every app.
- Built and refined UI features against a shared, Storybook-documented design system used across all customer-facing apps, ensuring pixel-accurate, consistent presentation of complex workflow state (deal status, contracting stages, activity history) to non-technical end users.

Frontend Engineer — Bet On Talent

2025 - 2026 (1 year) | Remote

- Built and shipped a production Next.js 16 (App Router, React 19, TypeScript) member portal — authenticated flows for login, profile, ticket transactions, giveaway entry, and referrals — plus a full admin console for role/permission management, audit logs, and platform analytics, backed by an Express/TypeORM API designed end-to-end.

- Architected the server/client data boundary for security and performance: async Server Components fetch through server-only authenticated clients so httpOnly JWT cookies never reach the browser, while TanStack Query drives client-side caching, polling, and invalidation — replacing ad-hoc useEffect fetching with a consistent, typed pattern shared across both layers.
- Diagnosed and fixed a production security bug at the framework level: traced a silent-logout defect to Next.js's automatic <Link> prefetching triggering a GET-accessible logout/token-revocation route on Amplify SSR, then refactored all destructive actions off GET routes — closing a CSRF-adjacent vulnerability class, not just patching the symptom.
- Built a 60+ component design system (UI primitives → layout → feature components) with light/dark theming and accessible, responsive patterns documented and visually tested in Storybook with a11y addon coverage.
- Owned quality and CI hygiene: 60+ Jest/React Testing Library suites with enforced coverage thresholds, Husky/lint-staged pre-commit hooks, ESLint 9 flat-config + Prettier — mirroring the same zero-warning discipline enforced on the backend API this frontend consumes.

Frontend Engineer — Vialma

July 2024 – Mid 2025 | France · Remote

- Developed a music streaming platform with Next.js, React.js, Node.js, and REST APIs.
- Improved playback performance with lazy loading and optimized API calls for scalability.
- Delivered responsive, multi-device experiences and collaborated with global teams for seamless deployments.

Full-stack Developer — Confidential Jobs

January 2024 – June 2024 | New York · Remote

- Delivered web apps using React.js, Next.js, Node.js, and TypeScript for multiple clients.
- Built scalable APIs, integrated third-party services, and optimized frontend performance.
- Ensured responsive designs and collaborated remotely with global teams for on-time delivery.

Senior Frontend Engineer — Legitify

May 2023 – December 2023 | Stockholm · Remote

- Built a secure, real-time notarization platform using React.js, Redux-Saga, and TypeScript.
- Integrated Socket.IO for live collaboration and optimized performance for multi-tenant systems.
- Converted complex designs into responsive, reusable UI components and ensured high code quality with Jest.

Senior Full Stack Developer — Oveun Software & Tech

2020 – 2023 | Spain · Remote

- Engineered modular React components, optimizing frontend scalability.
- Led UI transformations, converting wireframes into production-ready applications.
- Enhanced backend architecture, optimizing databases and integrating third-party services.
- Developed Web3 solutions, incorporating smart contracts and dApps.
- Achievements: Cut frontend development time by 35%, increased load speed by 50%, reduced API response time by 40%, and improved blockchain efficiency by 20%.

Full Stack Developer — Yonder

2017 – 2019 | Ireland · Remote

- Developed high-performance React applications, reducing load times by 25%.
- Led UI/UX optimizations, ensuring seamless API integration.
- Implemented caching mechanisms, boosting API efficiency.
- Achievements: Improved customer satisfaction by 18%, decreased API latency by 45%, and enhanced page load speed by 25%.

PROJECTS

Credit Card Risk Profiler

- Developed a fintech dashboard for a UAE-based startup, improving data analytics and user engagement.
- Led frontend development, converting Envision designs into Figma-based UI.
- Implemented RESTful APIs, authentication (JWT, PassportJS), and WebSocket communication.

Tech Stack: React, Redux Toolkit, Material UI, NestJS, Docker, AWS, MongoDB, Redis.

Cost Estimator

- Migrated a legacy jQuery-based frontend to React.js, improving efficiency.
- Enhanced performance with bundle splitting, caching, and API optimizations.
- Integrated AWS S3 for document storage.

Tech Stack: React, TypeScript, PostgreSQL, Express.js, Redis, Kafka, AWS S3.

Notarization Platform

- Developed a remote document notarization platform with role-based access.
- Integrated Stripe for payments and Veriff for identity verification.

Tech Stack: React, TypeScript, Redux Toolkit, TurboRepo, React Query, Material UI.

Web3 Marketplace

- Built a decentralized NFT marketplace, integrating Web3 wallets for transactions.
- Developed smart contracts on Ethereum and Binance Smart Chain (BSC).
- Used IPFS for decentralized storage, optimizing gas fees.

Tech Stack: React, TypeScript, Solidity, Web3.js, Ethers.js, Hardhat, IPFS, MetaMask.

CORE COMPETENCIES

- Leadership & Mentorship
- Agile & SCRUM Practices
- Problem-Solving & Analytical Thinking
- Communication & Remote Collaboration

EDUCATION

Bachelor's in Computer Science

RGPV | 2011 – 2015 | Indore, India

Higher Secondary

Choithram School | 2010 – 2011 | Indore, India
